

Anand Kumar Dubey

+91 8709501726 — duanand6@gmail.com — GitHub — LinkedIn

TECHNICAL SKILLS

Languages: Rust, Go, TypeScript, JavaScript, Kotlin, Dart

Mobile Development: Flutter, React Native, Jetpack Compose, Reanimated, Riverpod, Redux Toolkit, Kotlin Coroutines, Kotlin Flow, Firebase, Supabase

Backend APIs: Axum, Actix Web, Node.js, Express.js, Spring Boot, gRPC, REST, WebSocket, SSE

Databases: PostgreSQL, MySQL, MariaDB, SQLite, MongoDB, Redis

Messaging Distributed Systems: NATS, JetStream, Kafka, MQTT, Pub/Sub, Distributed Locks, Event-Driven Architecture

DevOps Infrastructure: Docker, Kubernetes, Docker Swarm, Nginx, Traefik, Caddy, AWS EC2, GitHub Actions, CI/CD, SSH, Linux, cgroups

Build Deployment: Dockerfile, Docker CLI, Nixpacks, Railpack, Buildpacks, Git-based Deployment

Developer Tools: Git, GitHub, GitLab, Gitea, Bash, Linux CLI, OpenAPI, Swagger

EXPERIENCE

Application Developer

Shap Digital Studios

September 2025 – July 2026

Equality Through Education (ETE) – Published Mobile Platform

[Google Play Store Live](#)

Flutter, Dart, Firebase Authentication, Cloud Firestore, Firebase Storage, PDF Engine

- Developed and deployed a production-grade educational platform to the Google Play Store, serving students with centralized curriculum and learning modules.
- Engineered an in-app PDF rendering and caching engine with background downloading and local storage for seamless offline access.
- Implemented role-based authentication, real-time cloud data synchronization, and administrative distribution workflows.

ThreadNest – Responsive Community Discussion Platform

[GitHub: /threadnest](#)

Flutter, Dart, Firebase Auth, Cloud Firestore, Routemaster Navigation

- Developed a cross-platform discussion forum supporting adaptive layouts for Android, iOS, and Desktop Web.
- Built subreddit/community management, Google/Guest authentication, upvote/downvote scoring, Karma calculation, and moderator controls.
- Implemented declarative routing using Routemaster and persistent light/dark theme switching.

Mobile Application Developer (Internship)

beyondNull

January 2025 – September 2025

SoundPulse – High-Performance Audio Streaming Mobile App

[GitHub: /soundpulse](#)

React Native, TypeScript, Zustand, React Native Track Player, MMKV Storage

- Engineered a mobile audio streaming application featuring background audio playback, notification/lock-screen controls, and interactive full-screen player.
- Implemented lightweight state management using Zustand and integrated MMKV for high-throughput local caching and instant state hydration.
- Built dynamic artwork color extraction, custom gesture-driven bottom sheets, and animated sliding text components.

LudoArena – Real-Time Multiplayer Board Game Engine

[GitHub: /ludoarena](#)

React Native, Redux Toolkit, Animated API, Lottie, Sound Utility

- Developed a 4-player cross-platform game engine featuring custom coordinate matrix mapping ('PlotData') and automated turn-switching rules.
- Managed complex game mechanics, safe spot validation, and token collision states using Redux Toolkit reducers and optimized selectors.
- Implemented interactive 3D dice roll physics, synchronized audio SFX triggers, and celebration modal dialogs.

PERSONAL PROJECTS

Incord – Full-Stack Real-Time Voice & Chat Platform

GitHub: [/incord](#)

Go (Golang), gRPC, UDP Voice Server, ScyllaDB, TimescaleDB, Redpanda, Kotlin, Jetpack Compose, LiveKit, Room DB

- **Distributed Backend:** Engineered a high-concurrency real-time platform in Go using dual-transport architecture: gRPC for transactional operations and custom UDP server for low-latency voice packet processing; backed by ScyllaDB (messages), TimescaleDB (telemetry), Redis (presence), OpenFGA (RBAC), and 171 automated Testcontainers tests.
- **Native Android Client:** Developed a 17+ screen native client in Kotlin using Jetpack Compose (MVVM), integrating LiveKit WebRTC for real-time voice/video channels and gRPC/Protobuf over OkHttp HTTP/2.
- **Offline Sync & Auth:** Implemented write-through offline caching via Room Database (19 DAOs, 21 Entities) with automatic JWT token rotation and bidirectional message stream synchronizers.

OpenOxide – High-Performance Systems & Server Infrastructure Engine

GitHub: [/openoxide](#)

Rust, TypeScript, SQLx, SQLite, Docker Socket API, WireGuard, OpenAPI

- Built a modular server infrastructure control engine in Rust featuring compile-time type-checked SQLx persistence and zero-overhead memory lifecycle management.
- Implemented secure daemon orchestration over Docker socket, automated WireGuard peer provisioning, and host-key pinned SSH client wrappers.
- Configured automated background health metrics ingestion pipelines with OpenAPI/Swagger schema generators.

EDUCATION

Bachelor of Computer Application (BCA)

Vidya Vihar Institute of Technology

July 2022 – July 2025
